**1 POSTDOC POSITION OPEN
AT
UNIVERSITY OF MODENA AND REGGIO EMILIA**

The laboratory of Valeria Marigo at the Department of Life Sciences of the University of Modena is offering 1 postdoctoral position (assegnista di ricerca) in the field of retinal degenerative diseases. Studies are focused on the development of pharmacological neuroprotective therapies for Retinal Degeneration in *in vitro* cell models and *in vivo* mouse models.

The postdoc will collaborate on a project funded by Fondazione Telethon titled “Pigment Epithelium-derived Factor (PEDF) peptides as therapeutic agents for inherited retinal degeneration”. The aim of the project is a preclinical research for the translation of PEDF-derived peptides as neuroprotective agents to cure retinal degeneration through the identification of new delivery systems and routes for sustained treatments. The candidate should test *in vitro* and *in vivo* new chemically modified peptides and new delivery systems. The position is offered to a young motivated PhD scientist with experience in molecular biology, cell biology, pharmacology or alike. Candidates with experience in cell culture technology, molecular and cellular biology, biochemistry and animal husbandry are strongly encouraged to apply.

Applications should include i) description of research accomplishments, ii) technical expertise, iii) CV with a separate list of publications and names of two referees.

The position is offered for 12 months, with the possibility of renewal, starting in January 2020.

Applications, including detailed curriculum vitae, should be sent to:

*Prof. Valeria Marigo
